Homework 2
CS 212
January 30 2019

The list of errors I received from the validator were:

1. **The character encoded was not declared.** To correct this, I added a `<meta charset="UTF-8">` tag in the head of the page.
2. **Element head is missing a required instance of child element title.** To fix this, I added a `<title></title>` element inside the head.
3. **Start tag body seen but an element of the same type was already open.** To fix this, I moved the `<h1>` element inside the body of the page.
4. **Stray end tag .** To fix this, I changed `` to ``.
5. **End tag for body seen, but there were unclosed elements.** By removing the `` tag, this error was fixed.
6. **Unclosed element .** When I removed the `` tag and put in the `` tag, this error was resolved.
7. **Garbage after </.** To fix this, I removed the `<!DOCTYPE html>` tag at the end of the file.
